

Squid – The Best Proxy Server

Squid is a full-featured web proxy cache server application which provides proxy and cache services for Hyper Text Transport Protocol (HTTP), File Transfer Protocol (FTP), and other popular network protocols. Squid can implement caching and proxying of Secure Sockets Layer (SSL) requests and caching of Domain Name Server (DNS) lookups, and perform transparent caching. Squid also supports a wide variety of caching protocols, such as Internet Cache Protocol (ICP), the Hyper Text Caching Protocol (HTCP), the Cache Array Routing Protocol (CARP), and the Web Cache Coordination Protocol (WCCP).

The Squid proxy cache server is an excellent solution to a variety of proxy and caching server needs, and scales from the branch office to enterprise level networks while providing extensive, granular access control mechanisms, and monitoring of critical parameters via the Simple Network Management Protocol (SNMP). When selecting a computer system for use as a dedicated Squid caching proxy server for many users ensure it is configured with a large amount of physical memory as Squid maintains an in-memory cache for increased performance.

“The Easiest and Cheapest Way to Increase the Speed of your Bandwidth !”

- We already have a huge Internet traffic and your bandwidth is saturated
- We are using more and more web services that heavy traffic demanding
- Our users are complaining because Internet access is getting too slow
- We need to expand your network but it's too expensive to upgrade your internet access
- **Squid** is a free & open-source full featured web proxy cache server

Proxy Server Benefits

- Speed up your web access
- Save significant bandwidth
- Unlimited Bandwidth & Unlimited Users
- Multi-Disk Caches
- Domain Traffic Shaping
